

the **FLEX PLEX** solution

FlexPlex was selected by
The Modular Building Institute
for an Award of Distinction

Flex Plex, when you need it nice and you need it now.

McDonald Modular Solutions introduces Flex Plex, the building that allows you to design your work environment from a clean sheet of paper. The Flex Plex concept is simple, we provide a left end unit, a right end unit and as many center units as you need to accomplish your space requirements.

Flex Plex modular buildings are engineered with a 60' clear span truss system that eliminates the need for load bearing walls and structural posts allowing you to leave the space open, or use our flex wall system to create the rooms you need.

Once completed, the interior and exterior finishes of your Flex Plex building will give you a clean, professional look throughout, like the building was designed around your floor plan.

Contact McDonald Modular Solutions today for more information.

Features:

- Clear Span Construction allows complete flexibility
- Smart Panel exterior siding for superior performance over the life of the product
- Designed and engineered to meet applicable state codes and ADA requirements allowing you worry free installation
